

5.1.2 flame-retardant anti-tear nursing blanket

The nursing blanket is a more human restraint for restless residents.
Quality 1060: Breathable, moisture-repellent and flame-retardant anti-tear fabric.

The nursing blanket is ideal for both user and nurse/caregiver. It gives the user sufficient freedom of movement and replaces unpleasant restraints. It also prevents exposure and has a preventive effect on hygiene.

The residents can easily be changed by means of the zipper while they are in the blanket. The material is very strong, has a high tear resistance and is flame-retardant. The nursing blanket can be considered as a sheet, with a built-in jacket. It is closed by a sturdy zipper that closes towards the foot end.

It is REQUIRED that the nursing blanket always be used together with a bed rail.

Md 4004960^{TS}

Mattress-encompassing nursing blanket, (dark grey zipper around the mattress), 2 side openings with zipper (for probes, light grey), no front zipper, zipper over the shoulder to the side and till the feet (light grey zipper), 6x strap with a buckle to attach the nursing blanket to the bed frame.
